

Aluminum Burn Clips are used as part of the ClarkDietrich H-Stud Area Separation Wall assembly and are designed to melt and break away when exposed to fire. The clips are used to hold the area separation wall assembly in place at the floor, roof and truss line between adjacent units.

Should a fire break out in one unit, the Aluminum Burn Clips on the fire-ridden side of the area-separation wall will melt, allowing the wall structure for that side to collapse. The Aluminum Burn Clips on the non-fire side will remain intact and hold the area separation wall in place as a barrier to contain the fire within the unit of origin.

The FastBridge™ clip is a stiffened, G90 galvanized steel clip that's tested and designed to facilitate the rapid, efficient installation of 1-1/2" U-Channel lateral bracing for exterior curtain wall framing, loadbearing walls or interior partitions constructed of structural or non-structural studs.

The wall stud friction fit design allows for as little as one screw for the connection to the U-Channel.

EasyClip™ S-Series™ support clips are commonly used for rigid connections in window and door framing, joist, bypass or other miscellaneous connections to secure one framing member to another, or to secure framing members to the structural frame.

A FastClip deflection clip installs quickly with screws or powder-actuated fasteners, and provides adjustable standoff to ensure a plumb wall plane. Proprietary Deflection Screws are provided with each clip to ensure friction-free sliding. Each clip is also embossed with fastening patterns to ensure accurate placement of fasteners.
